# Invisalign

## The clear alternative to metal braces

**Invisalign** works by a series of custom-moulded clear removable aligners (retainers). These aligners are specially prepared with the technology to position and straighten your teeth.

The course of treatment involves changing a series of aligners at regular intervals, which will be monitored by your dentist. Unlike metal braces these comfortable clear aligners are easily removed while eating, brushing and flossing.

Since **Invisalign** is practically invisible and comfortable to wear... there is no unwarranted attention drawn to your mouth, you can carry on with active lifestyle.

**Invisalign** can be used to treat the vast majority of crowding for adults and teenagers.

It starts with a consultation with **Dr Kelvin Leung** or **Dr Winnie Tang**...

- Fluoride
- Oral Hygiene Instructions

When your child receives the voucher please contact the surgery to arrange an appointment. Vouchers must be presented to reception at time of service.

REMEMBER...  
New Season, New Toothbrush!

# Sweet Dreams

The team at Market Square Dental is committed to offering our patients from toddlers to pensioners the very best in quality dentistry. We have found over the years that some patients require a general anaesthetic for their dental treatment because of different circumstances, whether it's a medical condition or anxiety, we cater for all needs.

Dr Kelvin Leung attends the Mater Children's Private Hospital fortnightly to provide these services for children between the ages of 2 – 16years. We are also pleased to announce that Dr Winnie Tang also offers the same service for our adult patients at St. Andrews Hospital. If you are a patient, or know of someone that these services would benefit please contact our surgery and chat with our receptionists. They would be happy to address any of your inquiries.

## What's Fissure Sealants?

Fissure

**Sealants**, is a simple and inexpensive procedure that helps protect your child's teeth from decay. The sealant material is a clear resin coating that actually bonds to the surface of the teeth, literally sealing out the decay.

All teeth have natural pits and fissures (grooves) on the surface and these places tend to trap bacterial plaque. Fissure sealants cover or fill in the pits, which will then eliminate the places that bacteria can congregate. Children whose permanent teeth are beginning to erupt are suitable to have this procedure performed. Sealants are quick and painless.

Our practice is a MBF Membercare providers. Please make sure you bring your health fund card in to your appointments.
