Invisalign

The clear alternative to metal braces

Invisalign works by a series of custom-moulded clear removable aligners (retainers). The aligners are specially prepared with the technology to position and straighten your teeth.

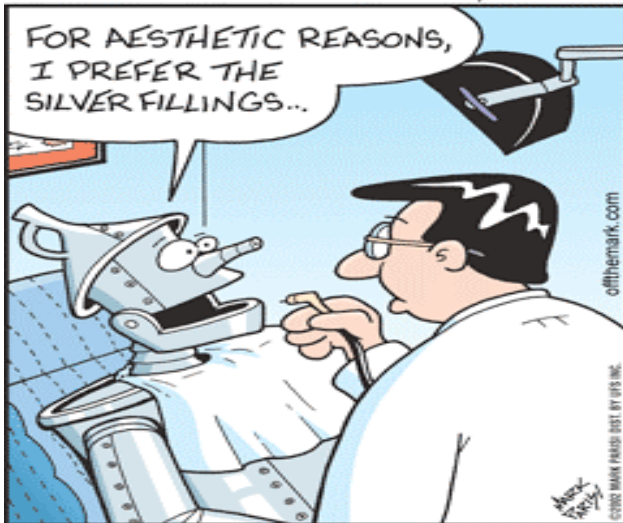

The course of treatment involves changing a series of aligners at regular intervals, which will be monitored by your dentist. Unlike metal braces these comfortable clear aligners are easily removed while eating, brushing and flossing.

Since **Invisalign** is practically invisible and comfortable to wear... there is no unwarranted attention drawn to your mouth, you can carry on with active lifestyle.

Invisalign can be used to treat the vast majority of crowding for adults and teenagers. It starts with a consultation with **Dr Kelvin Leung or Dr Winnie Tang**...

You Don't have to be a TIN MAN

Say goodbye to unsightly amalgam (mercury) fillings. Virtually invisible, tooth-coloured fillings make your teeth appear whiter, brighter and healthier than before. It is now possible to have tooth-coloured fillings created to match the exact colour, texture and translucency of your existing teeth.

Tooth-coloured fillings offer the same strength as natural tooth enamel and do not stain teeth. They limit further tooth decay, as the surface of tooth-

coloured fillings is very smooth and therefore does not adhere to any food particles.

Tooth-coloured fillings are not only limited to new dental repairs, older fillings may also be replaced.

Did you know that elephants have the largest teeth in the world? Elephant's tusks are actually modified incisors.

MSDG team wish you a prosperous new year
